Kawasaki Kisen Kaisha, Ltd.

Commencement of Operation of New Logistics Facilities for Finished Vehicles in Indonesia

PT. "K" Line Total Logistics Indonesia (KTLI), the comprehensive logistics company of Kawasaki Kisen Kaisha., Ltd. ("K" LINE) in Indonesia, commenced operation of the Kline Vehicle Processing Center (KVPC), a logistics facility for finished vehicles, in Jakarta in early November. "K" LINE subsidiary PT. "K" LINE INDONESIA founded KMDI Logistics (KMDI) jointly with local company PT. Mobaru Diamond Indonesia in 2003. Since then, we have been engaged in the business of the land transportation of finished vehicles by carrier car in Indonesia for 20 years. The commencement of the operation of the new facilities stems from the consignment of a finished vehicle logistics business in connection with Hozon New Energy Automobile (brand name: NETA MOTOR) entering the Indonesian market. Hozon New Energy Automobile is a battery electric vehicle (BEV) manufacturer in China that has recently been growing rapidly. This facility is located in Marunda Center, approximately 10 kilometers from Jakarta Port, where logistics facilities are concentrated.

1. KMDI's land transportation of finished vehicles landed at the port of Jakarta to the facility
 2. Storage of vehicles at KVPC and various inspections prior to handover to dealers (PDI-Pre Delivery Inspection)
 3. Final delivery by KMDI
 4. KTLI's integrated management including the provision of the above logistics solutions to clients
- The integrated finished vehicle logistics service structure is to be established as follows:

"K" Line group has been offering the finished vehicle logistics services including terminal, land transportation, storage and PDI services in countries such as ASEAN, Australia and Latin America. By utilizing the expertise in high-quality transportation that has been cultivated through marine transportation by car carriers, "K" Line group will continue working hard to increase customer satisfaction.
